Reasons For Allowance

The present invention comprises a control system for a fuel gas compressor supplying fuel to a gas turbine engine, the control system being operative to adjust a recycle valve and inlet guide vanes associated with the gas compressor. Systems combining gas turbines and fuel gas compressors are well known in the art as indicated by any of the references cited on the attached PTO-892. Furthermore, at least some of the prior art systems include compressor controls which operate both recycle valves and inlet guide vanes; see elements 23 and 29 in Blotenberg '776, and elements 8 and 21 in Blotenberg '068. None of the references of record, however, show or fairly suggest such a control system in which the control inputs to the recycle valve and guide vanes are adjusted to compensate for gas turbine load loss in the manner specified by the claims. The claimed invention is therefore considered patentable over the prior art.
